

## **Claim Package Checklist – Enhanced Asbestosis (Grade I Non-Malignancy)**

*All fields on claim form must be completed within the required Sections unless specifically marked as optional on the claim form.*

*Enhanced Asbestosis – Grade I Non-Malignancy is defined on page 13 of the J. T. Thorpe Matrix as ... (vi) Enhanced Grade I Non-Malignancy. If an Injured Person has evidence of Asbestosis of a severity exceeding the following criteria, the liquidated value of that Injured Person's case will be adjusted by 1.5.*

1. *The Injured Person must establish at least a 10-year latency period between the date of first exposure to asbestos and the date of manifestation of the disease, and either clinical or pathological evidence of asbestosis as defined in subsection 2 or 3;*

2. *Clinical Evidence of Asbestosis. A diagnosis of pulmonary asbestosis by a Internist, Pulmonologist or a Occupational Medicine Physician who actually examined the Injured Person based on the following minimum objective criteria: Chest X-rays which, in the opinion of a Certified B-reader, show small irregular opacities of ILO Grade 1/1 or greater, or a asbestos related interstitial fibrosis on high resolution CT scan; and Pulmonary Function Testing results demonstrating either:*

- a) *FVC < 60% of Predicted Value with FEV1/FVC  $\geq$  65% (actual value) if the individual tested is at least 70 years old at the date of testing,  $\geq$  70% (actual value) if the individual tested is at least 60 years old but less than 70 years old at the date of testing, and  $\geq$  75% (actual value) if the individual tested is less than 60 years old at the date of testing; or*
- b) *TLC < 70% of Predicted Value; or*
- c) *DLCO < 60% of Predicted Value with FEV1/FVC  $\geq$  65% (actual value) if the individual tested at least 70 years old at the date of testing,  $\geq$  70% (actual value) if the individual tested is at least 60 years old but less than 70 years old at the date of testing, and  $\geq$  75% (actual value) if the individual tested is less than 60 years old at the date of testing; or*
- d) *VO MAX < 20 mL (kg • min) or < 5.7 METS with FEV1/FVC  $\geq$  65% (actual value) if the individual tested is at least 70 years old at the date of testing,  $\geq$  70% (actual value) if the individual tested is at least 60 years old, but less than 70 years old at the date of testing, and  $\geq$  75% (actual value) if the individual tested is less than 60 years old at the date of testing;*

*and, a statement by a Pulmonologist or an Occupational Medicine Physician stating that the asbestos-related lung disease is the probable explanation for the test result. [The test results for a), b), c) or d) as described above.]*

3. *Pathological Evidence of Asbestosis. A statement by a Pathologist, Pulmonologist or an Occupational Medicine Physician that a representative section of lung tissue demonstrates asbestosis as defined by the 1982 report of the Pneumoconiosis Committee of the College of American Pathologists and the National Institute for Occupational Safety and Health including the "demonstration of discrete foci of fibrosis in the walls of respiratory bronchioles associated with accumulations of asbestos bodies", and also that there is no more probable explanation for the presence of the fibrosis than prior asbestos exposure.*
